

CORPORATE OVERVIEW

C3SA Corporate Overview

Cybersecurity, resilience and technology integration for high-consequence environments.

BUILT FOR HIGH-CONSEQUENCE ENVIRONMENTS.

C3SA is a Canadian cybersecurity firm founded in 2005. We help organizations connect strategy, engineering, technology, readiness and stakeholder engagement so cyber risk decisions translate into operational outcomes.

CONSULTING • ADVISE Security strategy, architecture, assurance, privacy, compliance and executive advisory.	TRANSFORMATION • BUILD Security engineering, systems integration, Zero Trust, SecOps modernization and digital transformation.
SOLUTIONS • DEPLOY Curated cyber technologies integrated into operational environments, including sovereign and Canadian options.	TRAINING • PREPARE Executive, technical, tabletop, cyber-range and live-fire readiness programs.
ENGAGEMENT • ENGAGE Thought leadership, workshops, working groups, speaking and ecosystem development.	CYBERFIRE Rapid cyber incident response, investigation and recovery support when organizations are under pressure.

WHERE C3SA OPERATES

C3SA supports public- and private-sector organizations across Canada, the United States and Europe, with particular depth in regulated and mission-sensitive environments.

Government & Defence Security architecture, assurance, classified/sensitive environments, cyber defence modernization and readiness.	Critical Infrastructure IT/OT security, operational resilience, remote access, segmentation, incident readiness and cyber-physical risk.
Financial Services Security operations, compliance, threat intelligence, identity, resilience and control validation.	Healthcare Privacy, security assessment, threat exposure, architecture and resilience for sensitive health environments.
Technology & SaaS Product/security assurance, cloud security, AI security, application security and customer trust requirements.	Industrial & Maritime OT/ICS, distributed environments, ports, vessels, facilities and high-availability operational systems.

HOW WE WORK

C3SA combines a compact senior team with specialist practitioners and a partner ecosystem. Engagements are designed to move from evidence to implementation rather than stop at a report.

Establish mission, business, regulatory and operational context.

Collect evidence, identify material exposure and test assumptions.

Translate findings into target architecture, controls and prioritized decisions.

Engineer, integrate or deploy the required change.

Test whether controls, teams and technologies perform under realistic conditions.

Use operational evidence to refine resilience, detection and response.

WHY C3SA

The differentiator is not a single product or assessment. It is the ability to work across governance, architecture, engineering, operations, technology and readiness while preserving the link to mission outcomes.

20+ YEARS Continuous cybersecurity practice since 2005.	CANADA + EUROPE Canadian roots with a growing European presence.
HIGH-CONSEQUENCE EXPERIENCE Work across government, defence, critical infrastructure, healthcare and regulated environments.	INTEGRATION MINDSET Advisory findings can flow into engineering, deployment and operational validation.
ECOSYSTEM ACCESS Relationships across technology vendors, practitioners, academia and the cybersecurity community.	READINESS FOCUS Tabletops, ranges and live-fire exercises test whether plans and controls work when pressure arrives.

START WITH THE OUTCOME.

Whether the requirement is regulatory assurance, modernization, threat visibility, technology deployment, resilience testing or incident response, C3SA starts with the outcome that matters and works backward to the evidence, architecture and action required.
